This protein sequence represents a scaffoldin based on the CipA protein of Clostridium thermocellum. The scaffoldin protein is used in a novel composition that comprises at least 2 enzymes non-covalently bound to a peptide backbone (i.e. present sequence). The scaffoldin comprises a number of internal repeating units and at least one cellulose binding domain (CBD). The CBD may be altered to modify its affinity for cellulose, which may be desirable where cellulose binding would be disadvantageous. The enzyme is bound to the scaffoldin by a dockerin region of the enzyme, which binds to a repeating element of the scaffolding. The dockerin is preferably (CELS (AAW15237) or CelD (AAW15236). The composition can be used in reducing allergenicity, producing synergistic effects, and facilitating selective modification of substrate. By taking advantage of the cellulose binding domain of the complex, the complex could be immobilised for use in chromatographic scaffolding domain, it is possible to recover enzymes, or to quantify the amount of an enzyme in a solution. The composition could also be used in a multi-enzyme delivery system which could be used in the food industry, in food processing, animal feed, textiles, bioconversion, pulp and paper production, plant protection and pest control, as a wood preservative, topical lotions, and biomass conversions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition with enzymes non-covalently bound to a peptide backbone - used as a multi-enzyme delivery system, e.g. in food processing,

```

```
wultimeric protein, especially enzymatic, complexes are held together
by protein-protein interactions between domains designated dockerins
and cohesins, which are found on the catalytic and scaffold subunits
respectively. An example of such a complex is the cellulose degrading
protein complex from clostridium thermocellum, known as the cellulosome.
This complex comprises around 15 proteins including endoglucanases,
cellobiohydratases, hemicallulases, eg. xylanases or lichinases, which
interact with a central "scaffold" protein designated the cellulosome
integrating protein (Cip; see AAW43108). The catalytic subunits
integrating protein (Cip; see AAW43108). The catalytic subunits
integrating rotein (Cip; see AAW43108).
The invention relates to the isolation of proteins binding to a novel
dockerin type domain found in the C-terminal portion of Cip. The new
domain is designated a type II dockerin domain (as compared to the type
II dockerin domain has some sequence similarity to the type I dockerins
but is unable to bind type I cohesin domains.

The enzyme exhibits high performance in detergent compositions and prevents binding of certain soils to the xyloglucan left in the cellulosic material. It is stable at pH 5-10 at room temperature and has a half life of more than 50 days when incubated in a full formulated liquid detergent at 30 plus degrees celsius. The enzyme is used in detergent compositions, textile industry for improving the properties of cellulosic fibers, yarn, and woven or non-woven fabrics, preferably in textile scouring process, and in cellulose fiber processing industry for ratting of fibers e.g. hemp, jute, flax, and
                                                                                                                                                                                           The present sequence represents a xyloglucanase of the invention. The

The specification describes a xyloglucanase enzyme belonging to family 44 of glycosyl hydrolases and exhibiting a relative xyloglucanase activity of at least 30% at pH 5-8. The enzyme exhibits high performance in detergent compositions and prevents binding of certain soils to the xyloglucan left in the cellulosic material. It is stable at pH 5-10 at room temperature and has a half life of more than 50 days when incubated in a full formulated liquid detergent at 30 plus degrees celsius. The enzyme is used in detergent compositions, textile industry for improving the properties of cellulosic fibers, yarn, and woven or non-woven fabrics, preferably in textile scouring process, and in cellulose fiber processing industry for ratting of fibers e.g. hemp, jute, flax, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New xyloglucanase enzyme belonging to glycosyl hydrolases family, useful for detergent compositions, and textile or cellulose fiber processing industries

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 43,

Patent No. 5670623
Patent No. 5670623
GENERAL INFORMATION:
APPLICANT: Shoseyov, Oded
APPLICANT: Shpiegl, Itai
APPLICANT: Goldstein, Marc A.
APPLICANT: OF INVENTION: METHODS OF USE OF CELLULOSE BINDING DOMAIN PROTEINS
ITILE OF INVENTION: METHODS OF USE OF CELLULOSE BINDING SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: PENNIE & EDMONDS
STREET: 1155 Avenue of the Americas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, Application US/08330394A
Patent No. 5856201
GENERAL INFORMATION
APPLICANT: Shoseyov, Oded
APPLICANT: Shoseyov, Oded
APPLICANT: Shosejov, Ital
APPLICANT: Oddstein, Marc A.
TITLE OF INVENTION: BETHODS OF DETECTION USING THE
TITLE OF INVENTION: METHODS OF DETECTION USING THE
TITLE OF INVENTION: CELLULOSE BINDING DOMAIN
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
ADDRESSED: PENNIE & EDWONDS
STREET: 1155 AVENUE OF THE AMERICAS
APPLICANT: Goldstein, Marc A. APPLICANT: Dol, Roy H. TITLE OF INVERVION: CELLULOSE BINDING DOMAIN PROTEINS NUMBER OF SEQUENCES: 21
                                                                                                                                                                                                                                                                                                                                                                            SOFTWARE: Patentin Release #1.0, Version #1.25 SOFTWARE: Patentin Release #1.0, Version #1.25 CURRENT APPLICATION DATA:

Cellulosomal scaffolding protein B (Cellulosomal glycoprotein S1/SL)
(Cellulose integrating protein B) (Fragment).
Clostridium thermocellum.";
J. Gen. Microbiol. 139:307-316(1993).
-!- FUNCTION: THE ENZYME CATALYZES THE ENDOHYDROLYSIS OF 1,4-BETA-GLUCOSIDIC LINRAGES IN CELLULOSE, LICHEMIN AND CERRAL BETA-GLUCOSIDIC LINRAGES IN CELLULOSE, LICHEMIN AND CERRAL BETA-D-GLUCANS. PRINCIPALLY ACTIVE AGAINST BARLEY BETA-GLUCAN.
                                                                                                                                                                              GLYCOSYL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacteria; Firmicutes; Bacillus/Clostridium group; Clostridiaceae;

"Identification of the cellulose-binding domain of the cellulosome subunit S1 from Clostridium thermocellum YS.";
FEMS Microbiol. Lett. 78:181-186(1992).

-!- FUNCTION: ACTS AS A SCAPFOLDING PROTEIN IN THE CELLULOSOME. IT PROMOTES BINDING OF CELLULOSE TO THE CATALYTIC DOMAINS OF THE CELLULOLYTIC ENZYMES PROBABLY THROUGH THE BINDING OF THE NIBE REPEATED DOMAINS WITH THE DUPLICATED SEGMENT OF 24 AMINO ACIDS PRESENT IN CATALYTIC SUBUNITS OF THE CELLULOSOME.
-!- SUBCELLULAR LOCATION: CELL SURFACE.
-!- SIMILARITY: A 24 RESIDUES DOMAIN IS REPEATED TWICE IN THIS ENZYME.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            35.2%; Score 165; DB 1; Length 772;
